Cover letter

Hi,

I am DevOps Engineer with software engineering experience, strong Python skills, and a game industry background.

At iTechArt, I successfully automated routine processes using PowerShell scripts, saving 12+ hours of manual work weekly.

Additionally, my game development experience at Vizor Games, where I implemented a Jenkins pipeline and developed an automatic configuration file editing solution, would be beneficial in streamlining your games' release process.

I possess strong Python skills, have extensive experience with Git and Jenkins tools (and learning to work with TeamCity), and am comfortable with Linux, Windows, and MacOS operating systems, all of which are required for this role. Currently I'm studying work with Prometheus and Grafana. Additionally, my proficiency in English and Russian will enable me to interact effectively with global teams.

I am excited by Playrix's emphasis on technical expertise and employee growth, and I look forward to the possibility of contributing to your team. Thank you for considering my application.

Best Regards,
Harbatau
